Manage human interaction with the environment. Gain a broad foundation in civil engineering and environmental sciences, and learn how to design systems that anticipate and manage the way humans interact with the environment. During the program, you'll build expertise in areas including environmental management, planning and restoration, managed ecosystems and marine science.

In this program you will:

- Learn about the creative nature of engineering
- Develop skills in problem-solving, teamwork and communication
- Gain technical, business management and scientific environmental knowledge
- Graduate with the scientific skills needed to make judgements on the conservation and use of Australia's natural ecosystems and resources
- Complete more than 60 days of work experience
