Course Outline

Code: ENS254
Title: Earth Observation: Remote Sensing and Surveying

School of: Science & Engineering
Teaching Session: Semester 2
Year: 2019
Course Coordinator: Dr Sanjeev Kumar Srivastava Tel: 07 5459 4819 Email: ssrivast@usc.edu.au
Course Moderator: Dr Ben Jarihani Tel: 5459 4896 Email: bjarihan@usc.edu.au

Please go to the USC website for up to date information on the teaching sessions and campuses where this course is usually offered.

1. What is this course about?

1.1 Description
In this course, you will learn theoretical, applied & practical aspects of modern & conventional geospatial techniques necessary for observing and analysing earth resources. You will acquire a combination of high-tech & low-tech geospatial skills that will include satellite image analysis, digital map creation, and surveying. In addition to performing GIS and image analysis, you will use instruments such as compass, theodolite, GNSS (GPS). Finally, you will integrate data-sets collected using various techniques in GIS to compare their suitability for different situations.

1.2 Course topics
Remote Sensing and Image Interpretation:
• Electro-magnetic spectrum and sensor types
• Analogue and digital image interpretation
• Image analysis (classification and change detection)
• Image analysis (enhancements)
• Remote sensing applications to a variety of areas

Ground truthing for satellite image using surveying methods:
• Surveying Techniques
• Using theodolite, compass and range finders
• Data collection and analysis

Global navigation satellite systems (GNSS):
• GNSS fundamentals
• Global positioning system (GPS) and GLONASS
• Differential GNSS
• GNSS accuracy
• Data collection and analysis:

Integration of satellite images and other geographic data collected through surveying and GNSS in a GIS
• Visualisation through a cartographic map
• Data Analysis and Synthesis
2. **What level is this course?**
   200 level Developing - Applying broad and/or deep knowledge and skills to new contexts. May require pre-requisites and introductory level knowledge/skills. Normally undertaken in the 2nd or 3rd year of an undergraduate program.

3. **What is the unit value of this course?**
   12 units

4. **How does this course contribute to my learning?**

<table>

5. **Am I eligible to enrol in this course?**
   Refer to the [USC Glossary of terms](https://www.usc.edu.au) for definitions of "pre-requisites, co-requisites and anti-requisites".

5.1 **Enrolment restrictions**
   Nil

5.2 **Pre-requisites**
   Nil

5.3 **Co-requisites**
   Nil

5.4 **Anti-requisites**
   Nil

5.5 **Specific assumed prior knowledge and skills (where applicable)**
   Basic knowledge of computer operation.

6. **How am I going to be assessed?**

6.1 **Grading scale**
   Standard – High Distinction (HD), Distinction (DN), Credit (CR), Pass (PS), Fail (FL)

6.2 **Details of early feedback on progress**
   The task 1 for this course starts in week 3. This include a series of quizzes and activities where students get feedback on their performances.
6.3 Assessment tasks

Assessment Task 1: Report on remote sensing image analysis and interpretation

Goal: The purpose of this task is for you to develop your skills and knowledge to interpret, analyse, and evaluate the provided digital satellite imagery from different sensors for specific landscape features with different image analysis tools.

Product: Image interpretation report.
Table on satellite sensors comparison
Report with analysis products such as maps and tables.

Format: This task will have three parts. The first part will be about interpreting remote sensing images. The second part will be about comparing different satellite sensors. While the third part will be an individual report as a MS Word file with 1500 words. The report will require remote sensing image analysis of earth using different image analysis techniques. You will identify a study area and subsequently collect remote sensing data of the area. You will analyse the remote sensing digital data using image enhancement, image classification and/or change detection techniques.

Criteria: The assignment will be assessed based on:
- Ability to visually interpret satellite images
- Ability to understand satellite sensors
- Analysis and application of remote sensing techniques
- Selection of image analysis tools
- Processing the image to achieve the set goals
- Presentation of results
- Critical spatial thinking
Assessment Task 2: Data sheets, spreadsheet, and report on surveying and mapping of field information and its relationship with remote sensing data sets

**Goal:** This task will consolidate your learning across the course. You will compare the information collected through remote sensing techniques with the information collected through surveying techniques for ground truthing. The ground truthing will be undertaken using basic surveying techniques and using the global navigation satellite systems (GNSS) receivers. For this, you will plan and undertake field-based data-capture operation using a variety of techniques. These techniques will involve use of basic surveying with instruments such as a compass, theodolite, range finders and tape measure. The captured data-sets will be tabulated for traverse calculation and mapped digitally in a GIS.

**Product:** Reports in the provided templates

**Format:** Completed data sheets and spreadsheets on surveying and mapping for the first two parts, For the final part, an individual report as a MS Word file with 1500 words. The report will require mapping of the field data collected using conventional surveying techniques and using GNSS such as GPS. You will collect and or analyse data across the lecture series that will relate to this task. That process will ensure that you stay up to date and enable you to receive feedback on your learning in this large project. You will present methods of data collection and its subsequent mapping in geographical information systems.

**Criteria:** You will be assessed on:
- Ability to conduct surveying for field data collection
- Ability to map (manually as well as digitally) the data collected through surveying
- Documenting the use of tools, technique and methodology
- Critical spatial thinking

Assessment Task 3: Quizzes and activities (20%) 

**Goal:** This assessment task will facilitate your learning of geospatial technologies while considering the theoretical foundations. You will demonstrate your understanding of the critical concepts behind different geospatial techniques and their subsequent applications for observing and analysing earth resources.

**Product:** Exam during week 12 lecture

**Format:** A combination of multiple-choice and short-answer questions

**Criteria:** You will be evaluated on:
- Ability to understand the concept behind earth observation data collection and analysis
- Ability to understand concepts behind surveying and mapping methods and tools.

### 7. What are the course activities?

#### 7.1 Directed study hours

The directed study hours listed here are a portion of the workload for this course. A 12 unit course will have total of 150 learning hours which will include directed study hours (including online if required), self-directed learning and completion of assessable tasks. Directed study hours may vary by location. Student workload is calculated at 12.5 learning hours per one unit.

<table>
<thead>
<tr>
<th>Location: Specific Campus(es) or online:</th>

<tr>
<td>10</td>
<td>Introduction to global navigational satellite systems (GNSS) with an emphasis on global positioning system (GPS) Principles behind satellite-based navigation GNSS other than GPS</td>
</tr>
<tr>
<td>11</td>
<td>Errors associated with GNSS GPS augmentation</td>
</tr>
<tr>
<td>12</td>
<td>Exam Surveys with GNSS GNSS applications</td>
</tr>
<tr>
<td>13</td>
<td>Spatial data integration Knowledge-based image classification Review</td>
</tr>
</tbody>
</table>

Course content is subject to variation.

8. What resources do I need to undertake this course?

Please note that course information, including specific information of recommended readings, learning activities, resources, weekly readings, etc. are available on the course Blackboard site. Please log in as soon as possible.

8.1 Prescribed text(s)

Please note that you need to have regular access to the resource(s) listed below as they are required:

<table>
<thead>
<tr>
<th>Author</th>
<th>Year</th>
<th>Title</th>
<th>Publisher</th>
</tr>
</thead>
<tbody>
<tr>
<td>CRCSI</td>
<td>2018</td>
<td>Earth Observation: Data, Processing and Applications Series</td>
<td>CRC Spatial Information, Australia</td>
</tr>
</tbody>
</table>

Required and recommended readings

**Other free resources**

**TUTORIALS**

Prescribed tutorial

Available with Reprographics at print cost and the electronic copy will be available on the BlackBoard.

**Other resources**

8.2 Specific requirements
The later part of this course will require field visits. See instructional manual for clothing requirements. The prescribed tutorial manual must be purchased from the reprographic services.

9. Risk management
Health and safety risks for this course have been assessed as low.

It is your responsibility as a student to review course material, search online, discuss with lecturers and peers, and understand the health and safety risks associated with your specific course of study. It is also your responsibility to familiarise yourself with the University's general health and safety principles by reviewing the online Health Safety and Wellbeing training module for students, and following the instructions of the University staff.

10. What administrative information is relevant to this course?

10.1 Assessment: Academic Integrity
Academic integrity is the ethical standard of university participation. It ensures that students graduate as a result of proving they are competent in their discipline. This is integral in maintaining the value of academic qualifications. Each industry has expectations and standards of the skills and knowledge within that discipline and these are reflected in assessment.

Academic integrity means that you do not engage in any activity that is considered to be academic fraud; including plagiarism, collusion or outsourcing any part of any assessment item to any other person. You are expected to be honest and ethical by completing all work yourself and indicating in your work which ideas and information were developed by you and which were taken from others. You cannot provide your assessment work to others. You are also expected to provide evidence of wide and critical reading, usually by using appropriate academic references.

In order to minimise incidents of academic fraud, this course may require that some of its assessment tasks, when submitted to Blackboard, are electronically checked through SafeAssign. This software allows for text comparisons to be made between your submitted assessment item and all other work that SafeAssign has access to.

10.2 Assessment: Additional requirements
Eligibility for Supplementary Assessment
Your eligibility for supplementary assessment in a course is dependent of the following conditions applying:

a) The final mark is in the percentage range 47% to 49.4%
b) The course is graded using the Standard Grading scale
c) You have not failed an assessment task in the course due to academic misconduct

10.3 Assessment: Submission penalties
Late submission of assessment tasks will be penalised at the following maximum rate:

• 5% (of the assessment task’s identified value) per day for the first two days from the date identified as the due date for the assessment task.
• 10% (of the assessment task’s identified value) for the third day
• 20% (of the assessment task’s identified value) for the fourth day and subsequent days up to and including seven days from the date identified as the due date for the assessment task.
• A result of zero is awarded for an assessment task submitted after seven days from the date identified as the due date for the assessment task.

Weekdays and weekends are included in the calculation of days late.
To request an extension, you must contact your Course Coordinator and supply the required documentation to negotiate an outcome.

10.4 **Study help**
In the first instance, you should contact your tutor, then the Course Coordinator. Additional assistance is provided to all students through Academic Skills Advisers. To book an appointment or find a drop-in session go to [Student Hub](http://www.usc.edu.au/studenthub).
Contact Student Central for further assistance: +61 7 5430 2890 or [studentcentral@usc.edu.au](mailto:studentcentral@usc.edu.au)

10.5 **Links to relevant University policy and procedures**
For more information on Academic Learning & Teaching categories including:
- Assessment: Courses and Coursework Programs
- Review of Assessment and Final Grades
- Supplementary Assessment
- Administration of Central Examinations
- Deferred Examinations
- Student Academic Misconduct
- Students with a Disability

10.6 **General Enquiries**
In person:
- **USC Sunshine Coast** - Student Central, Ground Floor, Building C, 90 Sippy Downs Drive, Sippy Downs
- **USC South Bank** - Student Central, Building A4 (SW1), 52 Merivale Street, South Brisbane
- **USC Gympie** - Student Central, 71 Cartwright Road, Gympie
- **USC Fraser Coast** - Student Central, Student Central, Building A, 161 Old Maryborough Rd, Hervey Bay
- **USC Caboolture** - Student Central, Level 1 Building J, Cnr Manley and Tallon Street, Caboolture
