We live in an ICT age: computers, smartphones and networks are used by everyone, everywhere, to enable and drive innovation. If you enjoy problem solving, designing artificial worlds, or making ideas come to life, this program develops the skills you need to work on the cutting-edge of technology.

- Understand computing technology, and use it to create innovative solutions for people and organisations
- Specialise in your choice of three fields, including data storage, software development, information systems, telecommunications and networks and serious games development
- Gain hands-on experience through a professional ICT internship
- Build skills that translate across national or industry borders

Career opportunities
Business analyst, Systems analyst, information and communication technology specialist, systems architecture/integration, database programming, Web programming.

Membership
